

Airline Passenger Data

Number of flights operated by each airlines

Busiest Flight Route Matrix

Source	Bengaluru	Chennai	Delhi	Hyderabad	Kochi	Mumbai	Total
Bengaluru		19	12	24	21	18	94
Chennai	17		19	16	18	19	89
Delhi	21	17		18	19	14	89
Hyderabad	19	10	19		22	7	77
Kochi	8	18	18	18		19	81
Mumbai	15	15	12	18	10		70
Total	80	79	80	94	90	77	500

Monthly Flight Count Analysis

Average of Delay_Minutes by Airline

most frequently booked travel class

Relationship Between Ticket Price and Flight Delay

Count of Flight_No by Airline

Project Summary Dashboard ★ ★ ★ ★ ★

Key Insights

1. Top Performing Airline

- Vistara operated the highest number of flights in the dataset.

2. Busiest Flight Routes

- Several routes between major cities showed the highest flight frequency, indicating strong passenger demand.

3. Peak Travel Month

- January recorded the highest number of flights, making it the busiest travel month.

4. Most Preferred Travel Class

- Economy Class accounted for the largest share of bookings.

5. Flight Delay Analysis

- Flight delays varied among airlines, with no clear relationship between ticket price and delay duration.

Dashboard Highlights

Conclusion

This Power BI dashboard provides a clear overview of airline operations, passenger travel patterns, route activity, and flight performance. By analyzing these trends, airlines can improve operational efficiency, enhance customer satisfaction, and make informed business decisions. The project demonstrates how business intelligence tools can transform raw data into meaningful insights.
